the detection of poisons and strong drugs Osteoporosis (OP) is an important primary care health problem. It is common, causes significant suffering for many and contributes to an earlier death for some. With the ageing population and rising prevalence of conditions predisposing to OP, it is a growth area keenly in the sights of the pharmaceutical industries. Accordingly, primary care clinicians need to be able to distinguish facts ...

the detection of poisons and strong drugs A toxin is a poisonous substance produced within living cells or organisms; synthetic toxicants created by artificial processes are thus excluded. The term was first used by organic chemist Ludwig Brieger (1849-1919), derived from the word toxic. Toxins can be small molecules, peptides, or proteins that are capable of causing disease on contact with or absorption by body tissues interacting ...

the detection of poisons and strong drugs Les poisons sont, en biologie, des substances qui provoquent des blessures, des maladies ou la mort d'organismes par une réaction chimique, à l'échelle moléculaire. Cette définition exclut les agents physiques, même de petite taille (un caillot, une bulle d'air dans le sang, un courant électrique, une radiation, etc.). On différencie la pénétration volontaire de substances toxiques ...
