the development of compression waves in an adiabatic two fluid model of a collision free plasma This research presents the study and development of a biogas compression system for use in a household. A two horse power compression system was developed and the motor was used as a power source generator, including a gas scrubbing machine system.

the development of compression waves in an adiabatic two fluid model of a collision free plasma Development of a Two-stage Variable Compression Ratio Engine ABSTRACT Fuel consumption can be reduced in highly boosted gasoline engines with a Variable Compression Ratio (VCR). The increase in fuel economy is the result of operating an engine with higher compression ratios at low load compared to an engine with fixed compression ratio.
